

## SessionGuard

### Prevent Unauthorized Access to OWA Accounts

After users exit OWA, anyone can regain access to their account and compromise corporate information simply by clicking the back button on the browser or selecting from the list of most recently viewed pages. MessageWare SessionGuard blocks the reuse of login credentials after users exit Outlook Web Access

- Protects Outlook Web Access from re-use of saved login credentials
- Requires new user authentication after the previous computer user logs off
- Allows users to close OWA sessions and securely log off

*"At the recent G8 Summit, AttachView and SessionGuard provided the assurance we needed to limit our security risks."*

- Dataprise

## Product Features

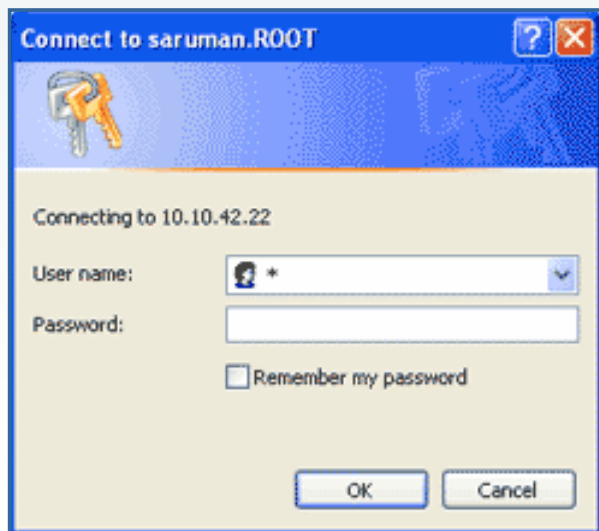

### ● Outlook Web Access Security

MessageWare SessionGuard blocks the reuse of login credentials after users exit Outlook Web Access. Unauthorized users are prevented from accessing a user's account by clicking the back button on the browser or viewing the browser's history

### ● Secure Outlook Web Access Logoff

Secure your users' Outlook Web Access session by ensuring they logoff securely. SessionGuard requires new user authentication after the previous computer user logs off

## Screenshots

- ◇ After pressing the back button, the user is prompted to reauthenticate
