

WORKPLACE UTILISATION ANALYSIS

# Optimise your workplace with data-driven decisions

Powered by Microsoft Power BI, Insights uncovers an array of insights from your resource utilisation metrics.

See key analytics at a glance

Get ahead of overspending on real estate or complaints about lack of meeting space.

The **Resource Central Insights** module provides a rich set of pre-built dashboards, utilising Power BI, based on your own Resource Central data set.

The data you need...in one place.

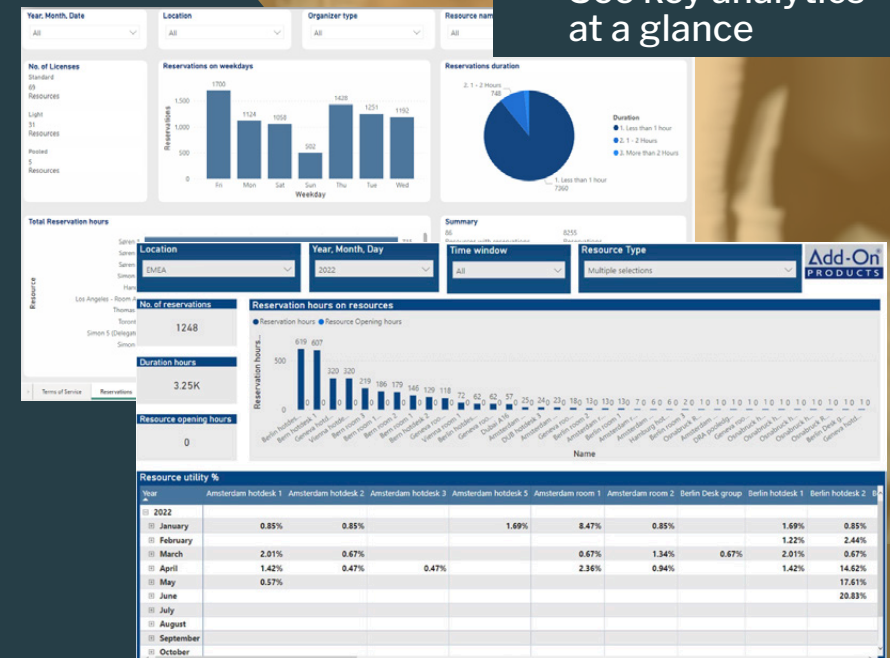

Dashboards are displayed in logical sections and can be filtered by date, location and organiser.

Whether tracking office occupancy, meeting room availability, or visitor traffic, you can now have the insights you need at your fingertips.

Easily answer your questions

Insights empowers facilities managers, catering managers, and other decision-makers to answer questions like:

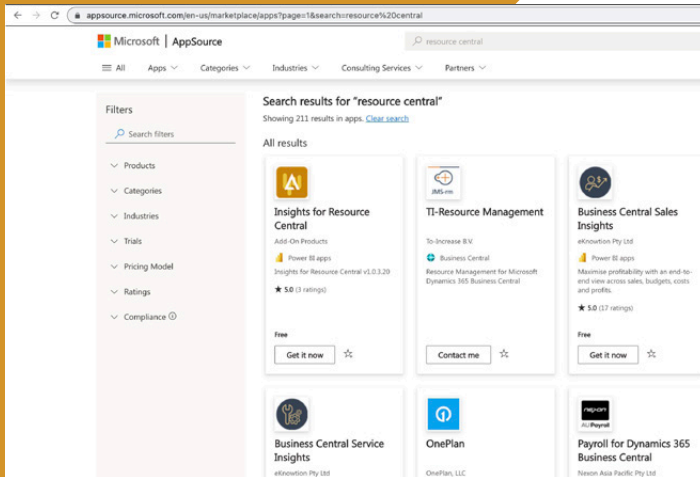

- What times of day at the office are busiest?
- Are there enough desks to cope with peak hours?
- Do we have enough meeting rooms to accommodate one-on-one meetings and huddles?
- What about visitor traffic?
- Is there a difference on catering spend based on persons, locations, months?
